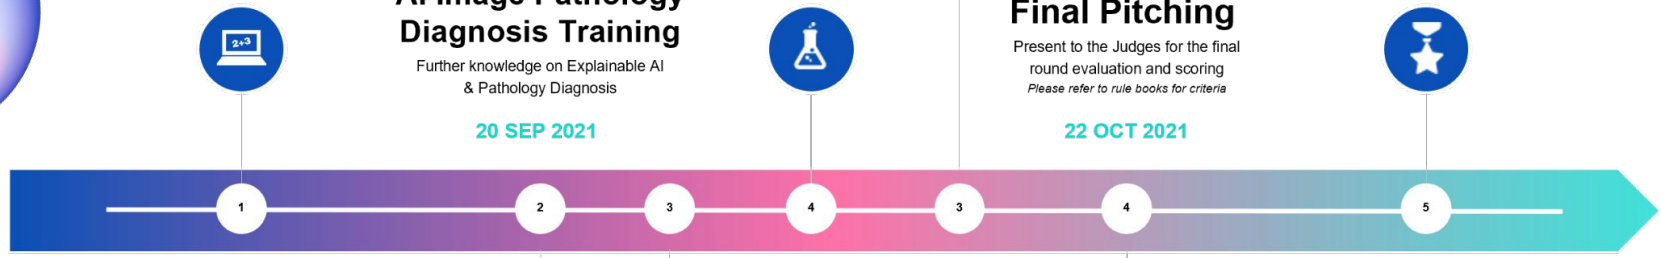
MindSpore Challenge 2021 - Pathology Diagnosis

In the competition, participants are invited to use **MindSpore** as the AI training and inference framework, for developing trustworthy AI pathology diagnosis models that ensures ***privacy***, ***explainable*** and ***high accuracy***.

Quota	30 Teams
Team size	1 - 3 Members
Events	Workshops, Pitching, Award Ceremony
Competition Stage	Model Evaluation and Pitching Stage

HUAWEI CLOUD HKSTP

Competition Timeline



16 SEP 2021

MindSpore Fundamental Training

Teaching participants how to use MindSpore, ModelArts and evaluation platform

Registration Deadline

24 SEP 2021

20 SEP 2021

AI Image Pathology Diagnosis Training

Further knowledge on Explainable AI & Pathology Diagnosis

28 SEP 2021

Briefing Session

Q&A Session for all participants

15 OCT 2021

Model Submission Deadline

22 OCT 2021

Final Pitching

Present to the Judges for the final round evaluation and scoring

Please refer to rule books for criteria

26 OCT 2021

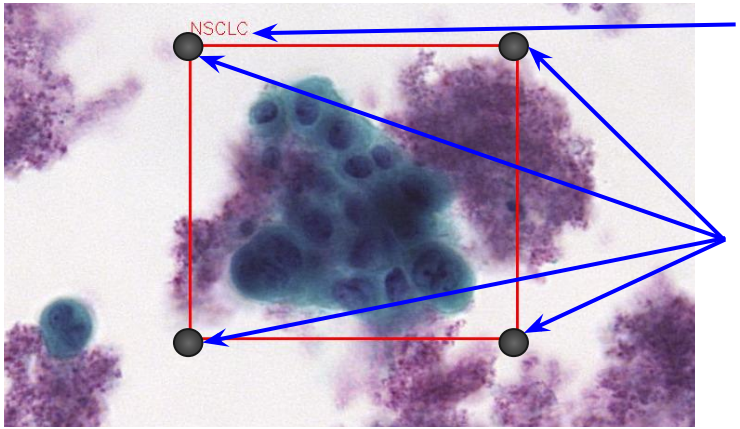
Award Ceremony

Winning Teams will be invited to the Annual Huawei Cloud Summit for the Awarding Ceremony

Model Evaluation - Problem Statement

Train a **MindSpore** AI model to **identify locations and classifications** of cancer cells in pathological images. The AI Models will **assist pathologists** in the diagnosis of **peripheral pulmonary diseases**.

This is a form of **multi-label object detection**.



Classification:
- Class of diagnosed cell

Location:
- Bounding Boxes

Class	English Name	Subclass	Example
SCC	*Squamous Cell Carcinoma*	*NSCLC*	AC	*Adenocarcinoma*	*NSCLC*	
SCLC	*Small Cell Lung Cancer*	-	NSCLC	*Non-Small Cell Lung Cancer*	-	
Model Evaluation - Evaluation Criteria

$$\text{Classification Score} = \frac{1}{|M|}\sum_{i \in M} \text{FROC}_i$$

$$\text{AUC} = \frac{1}{M \times N} \sum_{i \in \text{positive class}} rank_i - \frac{M(1+M)}{2}$$

Accuracy - FROC

- The trained MindSpore AI models should ***accurately locate*** and ***classify*** cancer cells.

Explainability (Bonus) - AUC

- The trained MindSpore AI models should provides ***pixel level feature attribution*** as an explanation for the task!

$$\text{Model Score} = \text{Accuracy Score} * 0.8 + \text{Explainable Score} * 0.2$$

The *top 6 highest model score* teams are invited to enter the **FINAL ROUND**

Final Pitching & Award Ceremony

Final Pitching

Date **22 October 2021**

Venue **Inno2, 17W, Hong Kong Science Park**

Time **2:30pm**

Agenda

- Welcoming Speech
- Solution Pitching
- On-site Evaluation

Award Ceremony

Event **Huawei Cloud Summit 2021**

Date **26 October 2021**

Venue **Grand Hyatt Hong Kong**

Time Afternoon

Prizes!

Winning Teams Award	Prizes per Team
Model Score Winner	**HKD 60,000 Cash + HKD 12,000 Huawei Cloud Credit**
Model Score Runner-up	**HKD 45,000 Cash + HKD 6,000 Huawei Cloud Credit**
Pitching Score Winner	**HKD 45,000 Cash + HKD 6,000 Huawei Cloud Credit**
Pitching Score Runner-up	**HKD 30,000 Cash + HKD 6,000 Huawei Cloud Credit**
Special Prize for Explainability	**Prizes worth HKD 500 + HKD 1,500 Huawei Cloud Credit (max: 30 winners)**

MindSpore

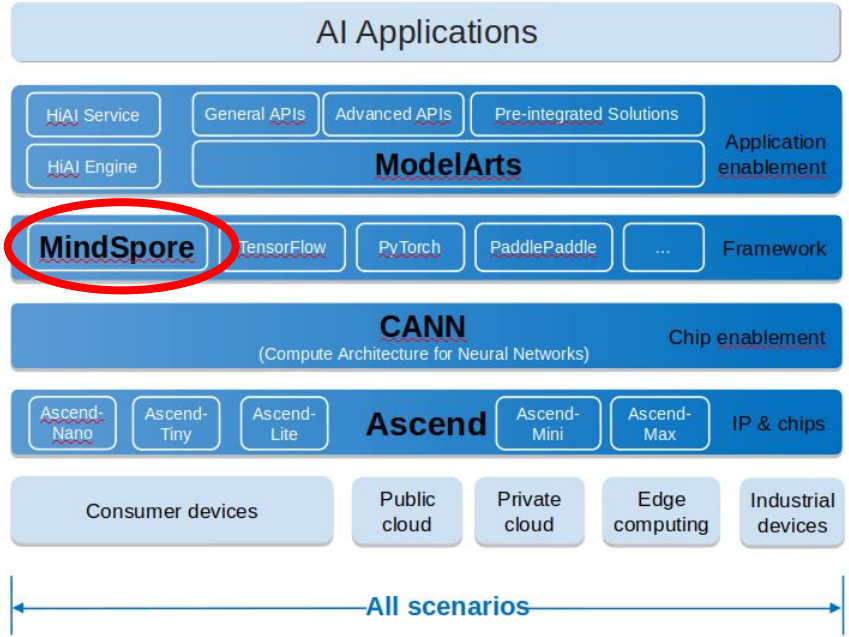
Introduction and Examples

What is MindSpore?

MindSpore

An **Open AI-framework** that supports the multi-processor architectures developed by Huawei.

It provides a unified APIs and end-to-end AI capabilities for AI model development, execution and deployment in all scenarios, including cloud, edge and devices.



DL Python Modules

	Dataset Preparation and Preprocessing	Network Construction and Training	Explainable XAI
MindSpore Modules 	`mindspore.dataset:` Complete solution equipped with vision and text operators.	`mindspore.nn:` network constructions `mindspore.ops:` common operators in neural networks `mindspore.model:` defining model, optimizers and loss function `mindspore.train:` provides common training utilities	**`mindspore .explainer:`** Provides methods to evaluate generate saliency maps/other explainable figures from inputs.
Tensorflow Pytorch Modules 	`tf.data` `torch.utils.data`	`tf.keras.Model` `torch.nn`	-

MindSpore Model Design and Training

```
import mindspore as ms
```

Dataset

```
dataset = ms.dataset.MnistDataset()

dataset.batch # batching data
dataset.map # preprocessing data
```

Network

```
class Net(ms.nn.Cell):
    def __init__(self):
        super(Net, self).__init__()
        self.flatten = ms.nn.Flatten()
        self.dense = ms.nn.Dense(1024, 10)

    def construct(self, x):
        x = self.flatten(x)
        x = self.dense(x)
        return x
net = Net()
```

Model

```
loss = ms.nn.SoftmaxCrossEntropyWithLogits()
optimizers = ms.nn.Adam(
  net.trainable_params(),
  learning_rate=0.01
)

model = ms.Model(
    net,
    loss,
    optimizers,
    metrics={"Accuracy": ms.nn.Accuracy()}
)

model.train(epoch=10, dataset)
```

AI APPS

Huawei Cloud

Elastic Cloud Server

ELASTIC CLOUD SERVICE (ECS)

A powerful compute engine for you to deploy any application

Object Storage Service

OBJECT STORAGE SERVICE (OBS)

A **cloud storage service** optimized for storing massive amounts of data

Agenda

Part I - Beginner Tutorial

- MindSpore Dataset
- MindSpore Neural Network Design
- MindSpore Model Training

Part II - Intermediate Tutorial

- Training a YoloV3 model
- Using ModelArts, OBS and Moxing Framework
- Submission to Portal
